4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the tallest trees in the stand. Site index curves are derived from age and height; estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI data is absent or present; e.g. young stands (0 to 30 yrs) or stands with a shrub anlysis component. Estimated fields in the data base are Inventory Type Group and SI if estimated source code.
