4d. SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. Site curves and curve equations used in deriving site index are identified in the data base. Where age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren=t present, e.g. young stands, or when SI is not recorded. Estimated SI values always precede a #. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
