4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index curves are based on undamaged leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when site class '0' trees cannot present, e.g. Mountain Hemlock (<20yrs). It is also used for a stand which always produces it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
