4d SITE INDEX

All SI are shown as the nearest metre referenced at 50 years breast height age. Site curves are used for age over 50 years bearing spruces. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when accurate SI curves cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
