**4d SITE INDEX**

All SI are shown to the nearest metre referenced at 50 years breast height age. Site curves are not available for some leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

**4e. ESTIMATED SITE INDEX**

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is assumed by a depth which always precedes it. Associated trees in the data base are Inventory Type Group and SI Estimated source code.
