4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees in the main canopy unless inventory age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when no valid SI trees are not present, e.g. young stands (including cutblocks) or where a stand which always has a low site index (eg. wetlands, forbs and shrubs) Base area Inventory Type Group and SI Estimated source codes:
