4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. Site species are identified by the first leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when outside SI ranges or not present, e.g. Fd SI 20 (est) 30. Estimated SI is derived by depth which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
