4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Information on site SI cannot be obtained from age and height, otherwise SI is known after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands (<30y/o). It is denoted by a slash which always follows SI, it is estimated in the study lake area inventory type Group and SI Estimated source code.
