4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Where site index SI cannot be obtained from age and height, estimates are often afun, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30s/s). It is denoted by a slash which always precedes it. A list of default fields in the data base are the inventory Type Group and SI Estimated sour ce code.
