4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. Site index curves are species and region specific. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young regenerating stands. SI is estimated using the same methods provided in Associated fields in the data base are Inventory Type Group and SI estimated source code.
