4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Where an SI is not planned be obtained from age and height measurements, or when after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<20y/o). It is denoted by a slash which always precedes it. Estimated SI data in the data base are inventory Type Group and SI Estimated source code.
