4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the Leading Species. Site curves used to determine SI are dependent on age and height; estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the SI. Site Index estimates in the data base are Inventory Type Group and SIE estimated source code.
