4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the species selected for the leading species, or the species with the highest site index. Age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren;t present, e.g. Recently logged, Non-Forest, Non-Productive. Except when always provided it, Associated fields in the data base are inventory Type Group and SI Estimated source code.
