4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index used on the polygon is the most recently updated SI. If a site index is planned to be updated from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands, or stands with no conifers. Stands which have always produced it. Associated fields in the data base are inventory Type Group and SI Estimated source code.
