4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI is known for planted trees age and height estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young plantations, or on sites where the leading species always predicts it. Abridged fields in the data base are Inventory Type Group and SI Estimated source code.
