4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years
Breast height age. SI is based on the age and height of the
dominant layer. When an accurate SI cannot be obtained from
age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g.
young stands (<30yrs). It is denoted by a slash which always
precedes the estimated value. The data base are Inventory
Type Group and SI Estimated source code.
