4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years.
Site Index (SI) is a species specific measure of the growth of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when subscript E here's a trend present, e.g. estimated site index = 18 is shown as E18. The absence of a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
