4d SITE INDEX

All SI are in feet/50 yrs. SI is nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant trees. SI can also accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when additional information is required to support a permit present, e.g. young stands (<30yrs). It is denoted by a (dash) which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
