4d SITE INDEX

All SI are trees in the nearest metre referenced at 50 years
Breast Height Age. SI is based on the age and height of the dominant trees. Trees too young or too small to accurate SI cannot be obtained from age and height, estimated SI is shown after or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when site index cannot be derived from normal methods. Usually young stands (<30yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
