4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years
Breast Height Age (BHA) is used for all trees 4.0 m and taller
Leading species, minimum site index of 5m will not be captured from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. Immature stands. The SI is derived from the nearest leading species provincial A Associated fields in the data base are Inventory Type Group and SI Estimated source code.
