4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age . SI is based on the age and height of the dominant trees. Where trees are absent SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
