4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years.
Broad Height Class - Site Index based on the species of the leading species. Site Index is one SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands, shrubs, etc. The estimate is taken from a site which always provides it. Associated fields in the data base are Inventory Type Group and SI estimated source code.
