4d SITE INDEX
All Si are shown for the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index is determined from age and height, estimated SI is shown after, or replaces the SI

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees arenot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. The codes are: Inventory Type Group and SI Estimated source code.
