Map Explanation

This map displays MPB attack data in two formats: raw attack data and summarized via polygons. The raw attack status data, derived from 30 metre satellite imagery, are displayed in an unprocessed form: areas unaffected by MPB attack will not be shaded with a status colour. Attack status and severity are also summarized for whole VRI polygons: non-pine and unaffected portions of the polygon are shaded with the same severity or status colour. Note: because the method of extracting attack information from the satellite imagery has changed, the user will be unable to compare these maps to those created last year (i.e., 2007 version). More detailed project information is available via [www.bcr.gov.bc.ca/ffts/fft/mpb\\_impact/mpb\\_impact2008.html](http://www.bcr.gov.bc.ca/ffts/fft/mpb_impact/mpb_impact2008.html).

\*Site index values are an estimate of site productivity but tree growth (mean tree height in metres at breast height age of 50 years).
