

MPB and Seed Planning Interactive Mapping - Lakes TSA 2009

Map Explanation
This map displays MPB attack data in two formats: raw attack data and summarized VRI polygons. The raw attack status data, derived from 30 metre satellite imagery, are displayed in an unprocessed form; areas unaffected by MPB attack will not be shown with a status colour. Attack status and severity are also summarized for whole VRI polygons; one area and unaffected portions of the polygons are shaded with the same severity or status colour. Note, because the method of extracting attack information from the satellite imagery has remained consistent, the user can compare these maps to the 2008 version. More detailed project information is available via: www.bcgov.ca/forestry/impacts/impacts_images_images2009.html.
