Note: The MPB red attack may overlap areas of grey attack on this attack status map. Typically, these are areas where the attack has occurred in successive stages (e.g., where the beetle has moved from one area and then overridges to another over a period of time). On the map, lighter red areas indicate the most recent (2007) attack, while darker red areas indicate red attack over 'old grey'. Note: only the most recent (2007) severe and very severe red attack has been displayed.
