Harvest Billing System
Release 19 Summary of Functionality
December 2, 2009

The main focus of this Release is:

1. Rating
2. Scale Returns
3. Maintenance

The following is a list of the fixes included in HBS Release 19:

Function/Subsystem	Summary
Stratum Advisor	Change the default for the 'Delete Unused Strata' check box on Copy a Sampling Plan (P896) and Create Plan from Actuals (P897) screens to unchecked so that any stratum that have to be used for the current cyclic year will not be deleted.
Rating	Formatting and sort issues have been repaired on the List of District Default Rates (R211) report.
Rating	Formatting and input data validation issues have been repaired on the Update Default Rate (P213) screen.
Rating	Repair Search for District Default Rates P210 screen, to change the caption from Scale Date to Effective Date, and to remove options that are no longer used from drop down lists.
Rating	Formatting and validation edits have been repaired on the Add a District Default Rate (P212) screen
Rating	Formatting and sort issues have been repaired on the List of District Default Rates (P211) screen.

Harvest Billing System

Release 19 Summary of Functionality

December 2, 2009

Function/Subsystem	Summary
Rating	Increase size of two columns in HBS tables (District Default Rate, and Override Rate) to accommodate rates (in $/M3) up to $9999.99. This will give HBS the capability to bill rates that exceed $999.99 (e.g. where there is a high Bonus Bid).
Rating	Develop and implement new HBS methods for rating interior timber that takes into account a new appraisal worksheet attribute (Stand Eligibility Scope), that describes which groups of grades and species are eligible to receive the stand rate.
Scale Returns	Enhance Piece Scale Summary Returns Segregations (P055) and the Monthly Scale Summary Returns Segregations (P105) screens, to display the Rate Source. This will show where the rates for each segregation were derived from and (if any) which were affected by an override rule.
Scale Returns	For users with the Ministry Scaling Administrator role, the default choice for scaling criteria group has been changed from 'Single Site' to 'Sites in Associated Districts' on screens: • P901 – Search for Late Submissions • P911 – Search for Scale Event Anomalies • P024 – Search for Submitted Detail Batches • P041 – Search for Detail Scale Transmissions • P045 – Search for Summary Scale Returns • P046 – Search for Detail Scale Returns • P047 – Search for Scale Returns in Submitted Batches
Scale Returns	Repair search screens to address FOIPP concerns - currently, an industry user is able to view data from other clients for scale returns that have not yet been issued. The returns must only be viewable after they have been issued.
Batch Processing (WS Invoicing)	Repair Batch Job B2041 so that product code is included in weigh slip transaction segregation, when debit (DR) transactions (originals and replacements) are billed.
