

## Harvest Billing System

### Release 23 Summary of Functionality

February 13, 2013

The focus of this Release is:

1. Scale Returns
2. Stratum Advisor
3. Queries
4. User Services

The following is a list of enhancements included in HBS Release 23:

| Function/Subsystem                 | Summary                                                                                                                                                                                                                      |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scale Returns</b>               | The Bulk Change functionality has been modified to provide the ability to save a Company Use stratum on a billable or non-billable scale return. Also, users now have the ability to perform a bulk Re-Edit.                 |
| <b>Scale Returns</b>               | Users can now search for both Log Tallies and Sample Tallies in a single query on the Search for Detail Scale Returns (P046) screen.                                                                                         |
| <b>Scale Returns</b>               | On the Search for Detail Scale Returns (P046) screen, users can now search for scale returns for a date range of up to 1 year if both a single version status and the Timber Marks in a Region/District option are selected. |
| <b>Piece Scale Summary Returns</b> | Invoices are no longer issued for Nil Cruise-based returns, submitted as Cruise Volume Estimates or Cruise based Area returns.                                                                                               |
| <b>Summary Scale Returns</b>       | HBS has been enhanced to increment the version number when editing any submitted summary return.                                                                                                                             |
| <b>Stratum Advisor</b>             | The Search for Populations and Search for Strata screens have been revised to present the text box for the Population above the text box for the Sampling Year                                                               |
| <b>Scale Returns</b>               | New edits to ensure that Sample Scale dates cannot pre-date the Weigh Slip scale date have been added.                                                                                                                       |

## Harvest Billing System

### Release 23 Summary of Functionality

February 13, 2013

| Function/Subsystem      | Summary                                                                                                                                                                                                                                                                                      |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scale Returns</b>    | HBS was repaired to prevent a Cancel and Replace on an issued scale return that is greater than 7 years.                                                                                                                                                                                     |
| <b>Final Bills</b>      | On the Final Bill Status Summary (P829) screen, the navigation links are now working which had prevented users from releasing Final Bills in their normal processing method.                                                                                                                 |
| <b>Final Bills</b>      | On the Configure Final Bill Status Summary (P828) screen, when selecting the Single Population option, entering a Population and not activating the "Display Stratum List" check box, then on the Final Bill Status Summary (P829) screen, the requested population number is now displayed. |
| <b>Batch Processing</b> | Repaired to the computation of volume fractions in B2022 to use fixed point arithmetic, with fixed precision which previously caused the batch job to fail.                                                                                                                                  |
| <b>User Services</b>    | The domains bcgov1, bcgov2, bcgov3, fsmaster and fsias choices have been removed from the drop down list on the HBS User Search, Search Change Log and Harvest Billing System User ID Confirmation screens.                                                                                  |
| <b>Queries</b>          | On the HBS Public Web Site, clicking on the Queries breadcrumb from either the Mark Monthly Billing History or the Mark Monthly Scaling History screens no longer causes an error to be displayed                                                                                            |
