

Introduction

In British Columbia, the right to harvest Crown timber is conferred through the form of agreements under the *Forest Act*. The *Forest Act* and the agreements require licensees to carry out waste assessments.

Waste assessments are carried out to quantify the volumes of merchantable timber and waste left on the harvested areas following the completion of primary logging. The waste volume data compiled from the assessments are used to invoice licensees for monetary and cut control charges.

This manual outlines the administration and field measurement procedures to be used in the assessments, and is intended to serve as the reference for industry and government staff who conduct or check waste assessments in British Columbia.

To Obtain a Provincial Logging Residue and Waste Measurement Procedures Manual

The manual is available electronically on the Internet at:

<http://www.for.gov.bc.ca/hva/manuals/rwprocedures/index.htm>

Comments and Suggestions
