

What's New, Version 1.10

This version contains the following enhancements and fixes.

1. Rebilling

If a mistake is found after a block has been invoiced, a Rebill button is available to ministry staff for reprocessing the block through HBS.

For those blocks that are in Billing Error status, there is a mechanism for correcting errors and resubmitting the block to HBS.

2. Auditing Block Status Changes

All status changes are now tracked under Status History on the bottom of screen 303 to include the userid who made the status change, the date/time stamp, and any user comments.

3. Interior and Coast scale grades

The drop down grade listings for coast and interior are now separated.

4. System fixes include the followings:

- Automated notifications on WASTE303 submissions
- Block Type Summary Report - plot size in stratum code
- Deleting Reporting Units with WASTE303 data
- FS702 not displaying in TEST
- Error on block reject with map (v1.10 UAT)
- Error when rejected Annual Plans and RU's
- Cross site scripting error when submitting marks with quotes
- WASTE205 - Rounding causing zero volume problem
- Sampling Statistics report - square rooting negative number
