

Google Earth Presentation and Workshop

Pat Teti
April 23rd , 2010

The following skills would be nice to have before the Presentation and are necessary before the Workshop:

- Zoom in/out, pan, tilt, and rotate the earth view using both the mouse and Navigation Controls.
- Expand and contract folders in the Places and Layers Panels and turn layers on and off.
- Change the transparency of layers using the transparency slider.
- Turn 3d terrain on and off.

These skills are also useful:

- Search for and fly to places using the Search Panel.
- Save the Earth view as a jpeg image file (File/Save/Save image)
- Switch the grid units display between UTM and Degrees
- Switch the elevation display between metres and feet.
- Display the scale bar.
