

Weyerhaeuser

WISA Planning and Implementation

Harvesting Prescriptions

Preferred Prescription Options

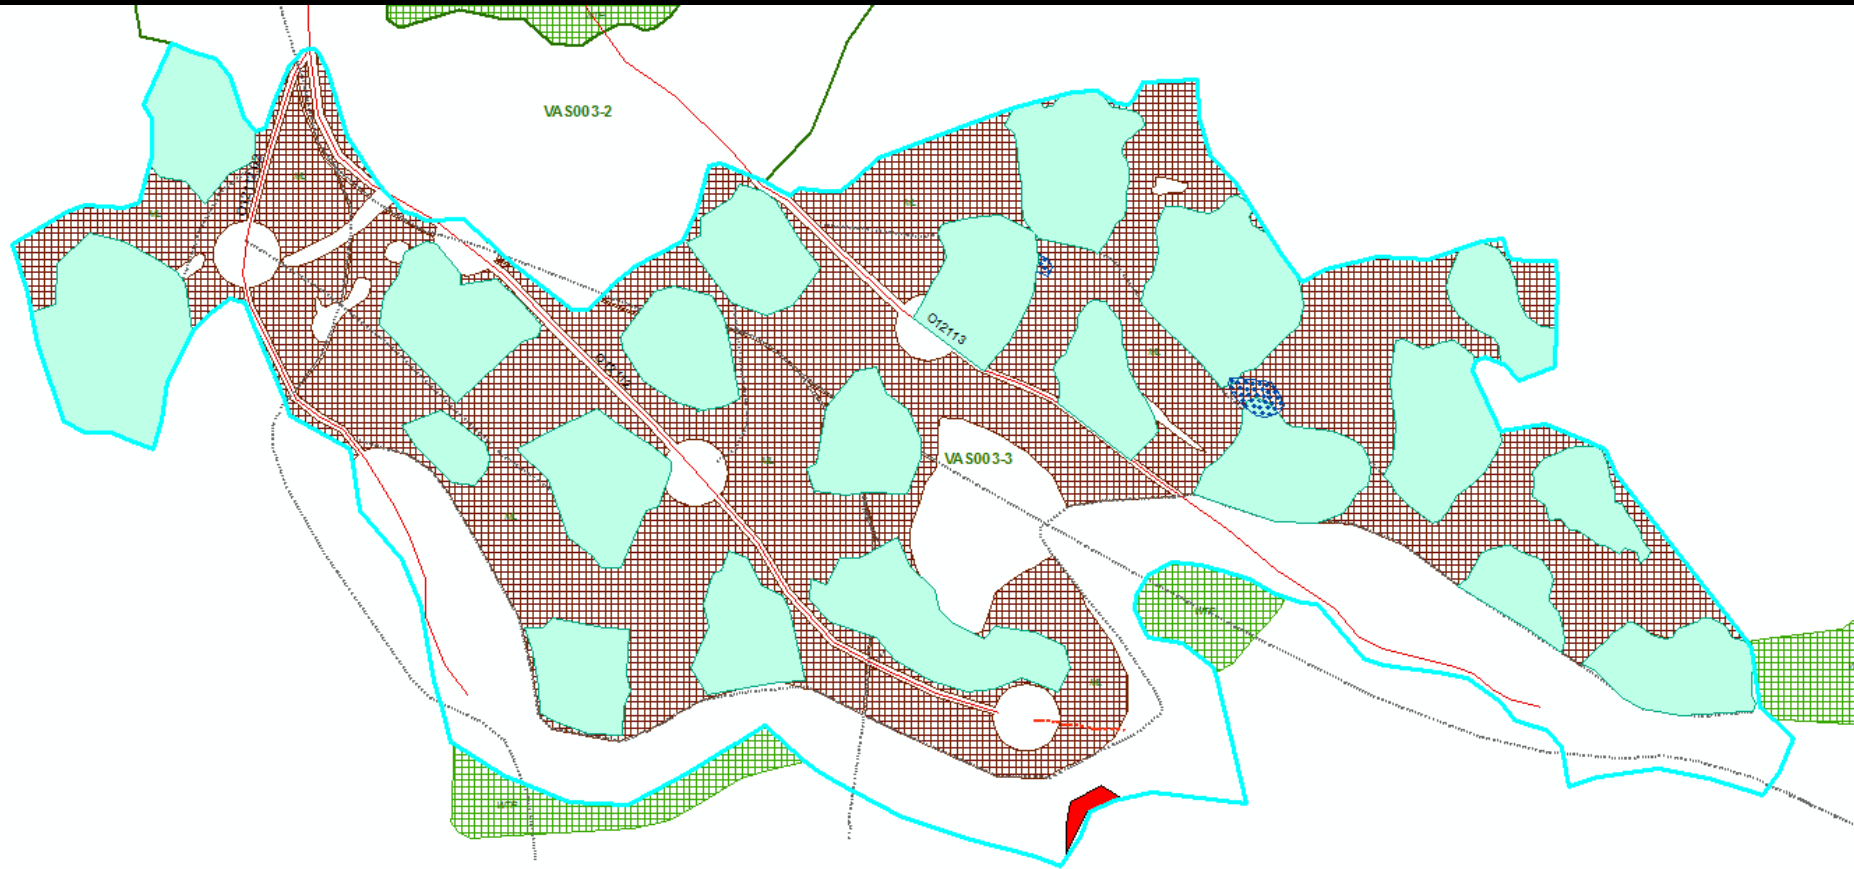

1. Patch cuts (~ 1 ha.) over 50% of area
2. Patch retention (0.2 ha. , 60m between patches)

Within area under prescription:

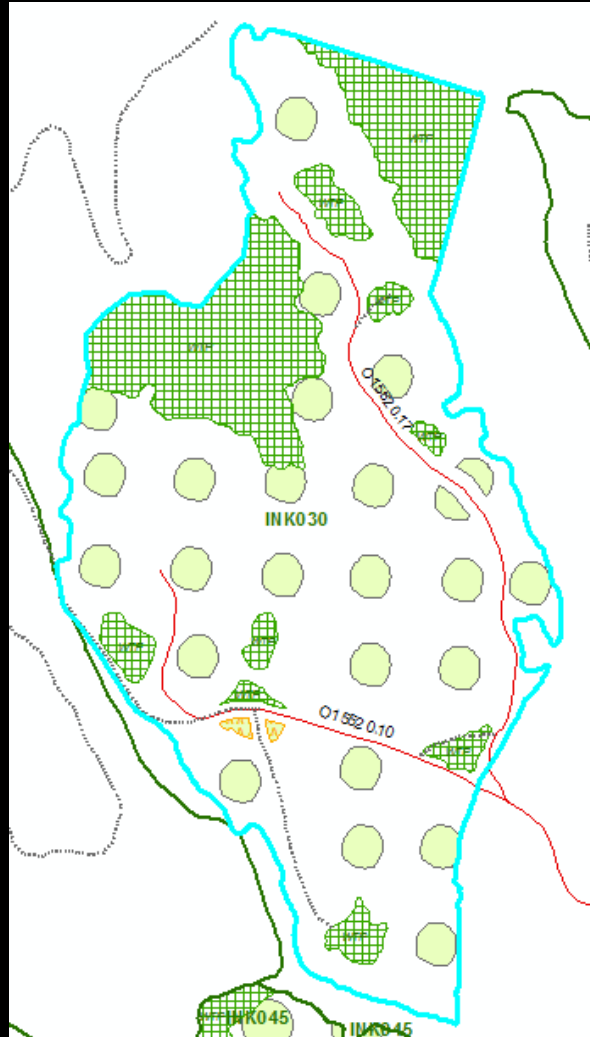

- Stem retention consistent with BMPs
- Retention of live large diameter Fir and Larch
- Retention of large diameter snags
- Retain large coarse woody debris
- Maintain critical distance to cover
- Removal of tree species of lesser habitat value (PI)

Example - patch cuts

Example – patch retention

Preferred Strategic Mgmt. Strategies

WHA Management Concept – depending on quality and extent of suitable habitat within WHA

- **Reserve zones extending to minimum 140 m radius from recent and active nests.**
- **Management zone with applied prescriptions from reserve zone to approx. 400 m**

Or

- **WHA with larger retention zone**

Preferred Strategic Mgmt. Strategies

- **WHAs require effectiveness monitoring**
 - **Suitability of habitat**
 - **Presence or level of use**
- **Monitoring applies to both reserved and managed areas**
