PU #1
Plant 40% Pli PSB 410 1+0, 40% Fdi PSB 412A 1+0, and 20% Sx PSB 412A 1+0. Plant to a target density of 1800 stems/ha with target spacing of 2.53 m and minimum spacing of 1.8 m. First priority: plant within screef close to edge of the screef, and second priority: plant between screefs to meet target, if required. Ignore naturals. Use minimum spacing to ensure optimal microsites are utilized and to maintain target density. Plant mixed bag throughout block but focus a higher % of PI along the southern border where a frost pocket is likely to develop, limiting Fd and Sx survival.
