BCTS
BC Timber Sales

PU 1 and 2 Treatment Prescription: Plant excavator piled/mounded/screefed PU with a 50/50 Pli/Sx mix at 1800 sph at 2.5 m spacing. Note, minimum spacing less than 2.0 metres is allowed to meet the target of 1800 sph due to slash and other planting obstacles. Only plant one tree per mound or screef. Plant the seedling in the center of a mound or screef. Note, that on a screef, the planter can alter the planting location from the center of the screef to closer to the edges of the screef; in order to find a better microsite if the screef is too severe. Avoid drip lines of all over-head live trees. Keep Spruce off of drier ridges and upper slopes. Where there is no site preparation target naturally raised microsites in wetter areas; in thicker duff or grass sod a 15x15 cm boot or shovel screef to the smear - able organic layer on top of the mineral soil is required. Ghost all Pli Residuals. Space off of naturals of good form, vigour, free of disease and that are as tall as or taller than planting stock. Plant one tea bag fertilizer with each tree.
