RATIONALE FOR TREATMENT:	Crop tree release and site prep. Most crop trees in this unit are suffering from VS and VT. This area has very low/patchy stocking and requires a fill plant. Treat all competing vegetation to expose plantable spots for fillplanting	Crop tree release. Hardwoods and tall woody shrubs are impeding conifer growth and performance throughout the block. Most stems are too tall for foliar brushing. FG objectives will not be met without treatment of competing stems.
