## GENERAL INSPECTION COMMENTS

(Reference Requirement ID # where appropriate, add extra sheets for more comments)

I inspected TA0568 Block 2 and 3 on July 28<sup>th</sup> 2020. Operations were not active at the time.

Block 2 had a lot of wood left standing, a section of upgraded/existing trail left with no deact. or rehab and the American FSR had no drainage throughout the block (Culverts appeared to be buried by grader)

Block 3 has a section of road (+/-200m) that still needs to be rehabbed. I didn't have time to walk the block to check for any wood left standing.

On August 8<sup>th</sup> 2020. I spoke with Jason Parker regarding what I had seen and what my concerns are regarding wood left standing being billed as waste. Jason expressed concerns with Block 2 and the layout being designated as conventional even though its very steep. I asked Jason to put his concerns in writing so I could pass it on to our layout staff. Jason also asked that we meet on site with Dan Pilon (P&D Logging) and discuss what his concerns are and discuss what's left to be done. Meeting date is TBD.

Road built into Block 3 is very nicely done.

Harvesting in Block 2 on difficult terrain looks good, rehab of temp skid trails done well.

American FSR is graded nicely but I have some concerns with the existing drainage structures being buried by grading.

Site is currently inactive as Interfors fire risk is too high.

I'll look forward to having a discussion on site. Please let me know if you have any further questions or concerns that I haven't addressed in this inspection.
