<p>This Site Plan is consistent with the results, strategies, objectives, and measures of the British Columbia Timber Sales (BCTS) Kootenay Business Area Forest Stewardship Plan (FSP) #601 2017-2022 (Version: September 30, 2020, Amendment #5), and has been prepared in accordance with FRPA Section 10 and FPPR Section 34(1).</p> <p>This cutblock includes areas referred and planned under the following preliminary block numbers:</p> <ul style="list-style-type: none">WAW-018 (final PRE-NUM identifying this cutblock) <p>Refer to the following for referral and planning information related to this cutblock:</p> <ul style="list-style-type: none">TA0654_Assess_LLA_20170511TA0654_Assess_Referral_20180122 <p>This Site Plan also applies to the following roads associated with this cutblock:</p> <p>BCTS Forest Service Roads:</p> <ul style="list-style-type: none">KL0236.17Kokanee6500: 0+680 m (Proposed, Long Term Permanent >5 years [LTP]) <p>Cutblock Roads:</p> <ul style="list-style-type: none">KLTA0654Kokanee6500: 0+431 m (Proposed, Long Term Permanent >5 years [LTP])KLTA0654Kokanee6500: 0+331 m (Proposed, Temporary 0-2 years [TEMP]) <p>This Site Plan also applies to the following external trails associated with this cutblock:</p> <ul style="list-style-type: none">No external trails are covered under this Site Plan. <p>All references to "this cutblock" within this Site Plan are inclusive of the aforementioned roads and trails.</p> <p>The Support Document provides additional details related to how the results, strategies, objectives and measures in the Site Plan are met.</p> <p>EXTERNAL TEMPORARY (TEMP) ACCESS STRUCTURES</p> <p>BCTS should consider opportunities to plant the following roads and trails, external to this cutblock, concurrent with in-block initial silviculture obligations:</p> <ul style="list-style-type: none">None <p>SHORT-TERM PERMANENT (STP) ACCESS STRUCTURES</p> <p>BCTS should consider opportunities to rehabilitate and plant the following roads and trails, post-completion of initial silviculture obligations (referring to TSA report as applicable):</p> <ul style="list-style-type: none">None

SOIL DISTURBANCE

SU	Max. Allowable Soil Disturbance (%)	Max. Amount TAS May Exceed MASD Prior To Rehab (%)	Max. Allowable Soil Disturbance For Roadside Work Areas (%)	Maximum Permanent Access Structures (%)
1	10	5	25	7
SU	CRITICAL SITE CONDITIONS THAT AFFECT THE TIMING OF OPERATIONS, AND HOW THEY AFFECT THE TIMING			
1	<p>ICHmw4 – 104/80 101/20: This SU will be harvested by cable-based methods with hand-felling, resulting in a clearcut with reserves silviculture system.</p> <p>This SU is located on a west aspect with slopes generally ranging from 45-65%, averaging 55%. Elevation range is 1075-1200 m.</p> <p>The leading species in this SU (from recce data) is Cw with a minor component of Hw and traces of Se and Bl.</p> <p>Soil textures are Sandy Loam (SL) within the upper (0-30 cm) and Loamy Sand (LS) within the lower (30+ cm) horizons. Coarse fragment content is approximately 10% throughout the horizons and the coarse fragments are estimated to consist primarily of gravels. Moisture regime is submesic (3) and nutrient regime is medium (C). The humus form is a mor (4 cm depth).</p> <p>This SU does not have sensitive soils.</p> <p>Site Series "General Description" from LMH70:</p>			

	<p>SMR 3 (2). 104 forests typically occur on mid slopes of warm aspects. Due to compensating factors, these sites also occur on cool aspects on upper slope positions and on cool to neutral aspects on mid slopes with coarse-textured or shallow soils. Soils are usually Dystric Brunisols with sandy loam textures and Mor humus forms.</p> <p>Tree species are often very mixed with Cw, Fd, Hw, Lw, and Pl in the overstorey and Cw and/or Hw in the understorey. Shrub cover is often low, with falsebox and black huckleberry as the main species. Understorey herbs include small amounts of prince's pine, twinflower, and, often, queen's cup. Although inconsistent in presence, bear-grass can be the dominant understorey species.</p> <p>Site Series "Management Issues" from LMH70: Tree species diversity is high on these sites and should be maintained. High brush competition from species such as bracken fern and thimbleberry can cause regeneration problems following overstorey removal. Soil erosion can be a concern on steep slopes. Drought may limit tree productivity and establishment during drier than normal years.</p>			
SU	Max. Allowable Soil Disturbance (%)	Max. Amount TAS May Exceed MASD Prior To Rehab (%)	Max. Allowable Soil Disturbance For Roadside Work Areas (%)	Maximum Permanent Access Structures (%)
2	10	5	25	7
SU	CRITICAL SITE CONDITIONS THAT AFFECT THE TIMING OF OPERATIONS, AND HOW THEY AFFECT THE TIMING			
2	<p>ICHdw1 – 101/80 104/20: This SU will be harvested by ground and cable-based methods with mechanical and hand-felling, resulting in a clearcut with reserves silviculture system.</p> <p>This SU is located on a west aspect with slopes generally ranging from 35-55%, averaging 45%. Elevation range is 980-1060 m.</p> <p>The leading species in this SU (from recce data) are Hw, Fd and Cw, with a minor component of Sx.</p> <p>Soil textures are loamy sand (LS) within the upper (0-50 cm) and sand (S) within the lower (50+ cm) horizons. Coarse fragment content is approximately 50%-40% respectively within the horizons and the coarse fragments are estimated to consist primarily of cobbles and gravels. Moisture regime is submesic (3) and nutrient regime is medium (C). The humus form is a mor (4 cm depth).</p> <p>This SU does not have sensitive soils.</p> <p>Site Series "General Description" from LMH70: SMR 4 (3). 101 forests typically occur on the mid-slope position of neutral to cool aspects. Due to compensating factors, these sites also occur on gentle, warm slopes, and on lower slopes of warm aspects where moisture receiving and shedding are approximately equal. Parent materials are typically morainal but can be colluvial or glaciofluvial and may have an eolian capping of volcanic-derived ash. Soils are typically sandy loam Dystric or Eutric Brunisols with variable coarse fragment content.</p> <p>Tree species diversity is high throughout all seral stages. Fd, Cw, Hw, Lw, Pw, and Bg are common across stands of all ages, while Pl, Ep, and At are abundant in early to mid-seral stands. Falsebox, black huckleberry, queen's cup, prince's pine, and twinflower are typical in the floristically diverse understorey.</p> <p>Site Series "Management Issues" from LMH70: This site series is amenable to the growth of a wide variety of species, and species diversity should be fostered. Brush competition can cause regeneration problems.</p>			
SU	Max. Allowable Soil Disturbance (%)	Max. Amount TAS May Exceed MASD Prior To Rehab (%)	Max. Allowable Soil Disturbance For Roadside Work Areas (%)	Maximum Permanent Access Structures (%)
3	10	5	25	7
SU	CRITICAL SITE CONDITIONS THAT AFFECT THE TIMING OF OPERATIONS, AND HOW THEY AFFECT THE TIMING			
3	<p>ICHdw1 – 104/90 101/10: This SU will be harvested by cable-based methods with hand-felling, resulting in a clearcut with reserves silviculture system.</p> <p>This SU is located on a west aspect with slopes generally ranging from 50-70%, averaging 60%. Elevation range is 1045-1155.</p> <p>The leading species in this SU (from recce data) are Hw and Cw, with a minor component of Fd and traces of Sx, At and Ep.</p> <p>Soil textures are loamy sand (LS) throughout the horizons (0-70+ cm). Coarse fragment content is approximately 30% throughout the horizons and the coarse fragments are estimated to consist primarily of gravels and cobbles. Moisture regime is subxeric (2) and nutrient regime is medium (C). The humus form is a mor (4 cm depth).</p> <p>This SU does not have sensitive soils.</p> <p>Site Series "General Description" from LMH70: SMR 3 (2). 104 sites occur across a range of submesic sites in the ICHdw1. They typically occur on moderate to moderately steep mid slopes of warm aspects, but due to compensating factors, they also occur on upper, shedding slopes of cool to neutral aspects with very coarse soils. Sites are typically derived from morainal or glaciofluvial materials. Soils are usually Dystric or Eutric Brunisols with moderate to moderately high coarse fragment content and sandy loam textures, which often become coarser at depth.</p> <p>Tree species diversity is typically high, with abundant Fd mixed with Lw, Pl, and Cw. The shrub layer is also diverse, with high cover of falsebox and Douglas maple, and minor amounts of saskatoon, birch-leaved spirea, and/or</p>			

	<p>Oregon-grape. Soopolallie, thimbleberry (<i>Rubus parviflorus</i>), and black huckleberry may be present. Pinegrass is sparse to absent, and twinflower, prince’s pine, and queen’s cup are common and often abundant. The moss layer is variable, with sparse cover of red-stemmed feathermoss and/or pipecleaner and heron’s-bill mosses.</p> <p>Site Series "Management Issues" from LMH70: This site series is amenable to the growth of a wide variety of species, and species diversity should be fostered. Warm aspect sites can provide important ungulate winter range due to lower snow depth and high forage availability. Soil erosion can be a concern on steep slopes. Brush competition from shrubs and bracken fern (<i>Pteridium aquilinum</i>) can cause regeneration problems. Invasive plant species can be a significant concern.</p>			
SU	Max. Allowable Soil Disturbance (%)	Max. Amount TAS May Exceed MASD Prior To Rehab (%)	Max. Allowable Soil Disturbance For Roadside Work Areas (%)	Maximum Permanent Access Structures (%)
4	10	5	25	7
SU	CRITICAL SITE CONDITIONS THAT AFFECT THE TIMING OF OPERATIONS, AND HOW THEY AFFECT THE TIMING			
4	<p>ICHmw4 – 101/80 104/20: This SU will be harvested by ground-based methods with mechanical and hand-felling, resulting in a clearcut with reserves silviculture system.</p> <p>This SU is located on a west aspect with slopes generally ranging from 30-50%, averaging 40%. Elevation range is 1015-1075 m.</p> <p>The leading species in this SU are Fd, Cw and Hw, with minor components of Sx and Bl.</p> <p>Soil textures are Sandy Loam (SL) within the upper (0-30 cm) and Loamy Sand (LS) within the lower (30+ cm) horizons. Coarse fragment content is approximately 10% throughout the horizons and the coarse fragments are estimated to consist primarily of gravels. Moisture regime is mesic (4) and nutrient regime is medium (C). The humus form is a mor (4 cm depth). This data was copied, and adjusted as per field observations, from SU1 since a formal soil pit was not dug in SU4, but a pit was dug 30m uphill in SU1.</p> <p>This SU does not have sensitive soils.</p> <p>Site Series "General Description" from LMH70: SMR 4 (3). The 101 site series occurs on mid-slope positions of neutral to cool aspects, or due to compensating factors, on lower slope positions or gentle slopes of warm aspects where moisture receiving and shedding are approximately equal. Surficial materials are typically morainal but can be colluvial or glaciofluvial; soils are typically sandy loam Dystric Brunisols. Old and mature forests are dominated by Hw with abundant Cw and occasionally sparse Fd or Lw. Understorey vegetation is typically sparse to moderate in cover with scattered falsebox, black huckleberry, foamflower, queen’s cup, and pipecleaner moss.</p> <p>Site Series "Management Issues" from LMH70: This site series is amenable to the growth of a wide variety of species, and species diversity should be fostered. Forest productivity is high. Brush competition can cause regeneration problems following overstorey removal.</p>			

FSP RESULTS AND STRATEGIES

	YES	NO	
4.5.1 Collaboration within Shared Management Units	☒	-	<p>4.5.1 COLLABORATION WITHIN SHARED MANGEMENT UNITS</p> <p>STRATEGY 1</p> <p>The TSM has offered to provide planning information, exchange information, collaborate and coordinate with each licence or agreement holder in relation to the following values, where applicable, to ensure that the objectives¹ set by government for the area will be achieved:</p> <ul style="list-style-type: none"> i. Old and Mature Forest ii. Connectivity Corridors iii. Landscape Level Patch Size Distribution iv. Ungulate Winter Range v. Fish Habitat in Fisheries Sensitive Watersheds vi. Water in Community Watersheds <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, “Objectives” means objectives set by government in legally established land use plans, in regulation, or enabled through regulation, for managing and protecting forest and range values.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Collaboration Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Collaboration Assessment
5.1. Soils	☒	-	<p>5.1. SOILS</p> <p>Legal References: FPPR Sec. 5, Sec. 12.1 (5), Sec. 35 and Sec. 36</p>

		<p>SUPPLEMENTARY TERRAIN STABILITY INFORMATION</p> <p>The BCTS Terrain Stability Management Model was followed in preparing this plan¹. A Terrain Stability Assessment was completed for this cutblock.</p> <p>RESULT OR STRATEGY 1</p> <p>This cutblock is consistent with FPPR Sections 35 and 36 as detailed in the Support Document. Final compliance with these FPPR Sections is the responsibility of each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM.</p> <p>For the objective for soils that is set out in Section 5 of the FPPR, the TSM has adopted, as a result or strategy, Sections 35 (soil disturbance limits) and 36 (permanent access structure limits) of the FPPR. Prior to the start of timber harvesting or road construction, through this site plan and the associated support document and if applicable a pre-work document, the TSM has notified each holder of a timber sale licence entered into or a road permit granted during the term of this plan that FPPR Sections 35 and 36 apply to the holder and the following additional strategies shall apply to each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM:</p> <p>STRATEGY 2</p> <p>As a strategy, and subject to Strategies #3 and #4 below, the construction of excavated or bladed trails or roads that were not previously identified in this plan¹ at the time of entering into of an agreement is prohibited where any of the following circumstances exist:</p> <ul style="list-style-type: none">a. a Qualified Professional has determined that soil conservation² is at risk if excavated or bladed trails or roads are constructed;b. slopes exceed 60%;c. a review and corresponding documentation by a Qualified Professional indicate that the risk to one or more FRPA values or another high value element³ is sufficient to warrant this prohibition. <p>STRATEGY 3 (Contractor & Agreement Holder Action Items)</p> <p>As a strategy, where an excavated or bladed trail or road not previously identified in this plan¹, is planned to be constructed by an agreement holder in the circumstances identified in 2b or 2c of Strategy #2, prior to timber harvesting or trail or road construction, a Qualified Professional will:</p> <ul style="list-style-type: none">a. conduct an evaluation⁴ that includes a preliminary consequence rating and assessment of factors to determine if a site review⁵ and terrain stability assessment are indicated; andb. ensure any indicated site review, terrain stability assessment and/or other related assessments are completed to address factors of terrain stability and potential risks to any identified FRPA values or other high value elements. <p>STRATEGY 4 (Contractor & Agreement Holder Action Items)</p> <p>As a strategy, prior to timber harvesting or trail or road construction related to Strategies #2 and #3, a Qualified Professional will:</p> <ul style="list-style-type: none">a. document the results of any evaluation, site review, terrain stability assessment, or other related assessments and the corresponding changes to the original plan in an amended plan or addendum document;b. provide a written notification to the TSM, in a format acceptable to the TSM; andc. ensure that trail and road construction activities, and deactivation/rehabilitation measures if applicable, are conducted in adherence to the amended plan or addendum document. <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, a ‘plan’ means a site plan, support document, harvest plan or a professional assessment related to terrain stability or soil erosion. ‘Identified in this plan’ means shown by a specific location or permitted area coded on a plan map or by text description of location or circumstance(s) in a plan document.</p> <p>² For the purposes of this section, ‘soil conservation’ means the prevention of soil degradation (including compaction, puddling, displacement, surface erosion and/or mass wasting) caused by soil disturbance, as determined from a hazard assessment evaluating site sensitivity to soil degrading processes.</p> <p>³ For the purposes of this section, ‘another high value element’ includes a human high-use area or transportation corridor, major utility corridor, consumptive use water source, immediate or downstream high value fish habitat, or other value as determined by a Qualified Professional.</p> <p>⁴ An ‘evaluation’, as described in Strategy #2, will utilize the BCTS ‘Terrain Stability Assessments Decision & Documentation Tool’ and related procedures as identified within the BCTS ‘Terrain Stability Management Model Practices Document’, both as amended from time to time.</p> <p>⁵ For the purposes of this section, a ‘site review’ means a preliminary office and/or field review by a Qualified Professional to determine if further investigation or a terrain stability</p>
--	--	---

			<p>assessment is required. The processes for site reviews and terrain stability assessments are as detailed within the BCTS ‘Terrain Stability Management Model Practices Document’, as amended from time to time.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Terrain Assessment Summary – Soil Assessment Summary – Access Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – BCTS Terrain Stability Assessment Decision and Documentation Tool – Terrain Stability Assessment / Site Review – Site Plan SU Descriptions – Harvest Plan
5.2.2 Enhanced Resource Development Zones - Timber	☒	-	<p>5.2.2 ENHANCED RESOURCE DEVELOPMENT ZONES - TIMBER</p> <p>Legal References: KBHLPO Objective 7, FPPR Sections 12(4) to 12(6)</p> <p>Relates to: KBHLPO Objective 4, FSP Sec. 5.3.1.3 and Sec. 5.3.1.6</p> <p>For the objective for Enhanced Resource Development Zones - Timber (ERDZ-T) that is set out in Objective 7 of the KBHLPO, the TSM specifies the following result:</p> <p>RESULT 1</p> <p>This cutblock is not located within an ERDZ-T identified on Map 7.1 of the KBHLPO. As per the 2017-2022 BCTS Kootenay Business Area FSP, there is no difference between Green-Up requirements within and outside of ERDZ-Ts.</p> <p>This cutblock is consistent with the practice requirements in Section 65 of the FPPR except that the height requirement in Section 65(3)(a) and Section 65(3)(b)(ii) is reduced from 3 meters to 2.5 meters.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Site Plan Results & Strategies Sections:</p> <ul style="list-style-type: none"> – 5.3.1.3 Green-up – 5.3.1.6 Wildlife and Biodiversity-Landscape Level <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Green-up Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Green-up Assessment
5.3.1.2 Old and Mature Forest	☒	-	<p>5.3.1.2 OLD AND MATURE FOREST</p> <p>Legal References: KBHLPO Objective 2</p> <p>For the objective for Old and Mature Forest that is set out in Objective 2 of the KBHLPO, the TSM will comply with Objective 2 and the following additional strategies are specified:</p> <p>KBHLPO OBJECTIVE 2</p> <p>KBHLPO Objective 2(1) old seral forest requirements are met through spatially identified OGMA's for this LU/BEC combination.</p> <p>STRATEGY 1</p> <p>This cutblock does not overlap a spatially identified OGMA. There are no requirements under this Strategy that are applicable to this cutblock.</p> <p>STRATEGY 2</p> <p>The requirements for old seral forest are met through spatially identified OGMA's for this LU/BEC combination. There is a mature seral management requirement identified under Objective 2(2) of the KBHLPO for this LU/BEC combination. This cutblock is consistent with Objective 2 of the KBHLPO (Old and Mature Forest).</p> <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, ‘danger tree’ means any tree (regardless of its size) that is a hazard to people due to:</p> <ul style="list-style-type: none"> a. its location or lean; b. its physical damage; c. overhead conditions; d. deterioration of limbs, stem or root system; or e. any combination of a to d above. <p>² For the purposes of this section, ‘rendered ineffective’ means, in the opinion of an RPF, damaged to a degree that the OGMA no longer has the biological value of mature or old forest considering the factors identified in footnote k of KBHLPO Objective 2 (5).</p>

			<p>³ For the purposes of this section, ‘aspatial analysis’ means, through GIS analysis and reporting tables, quantifying the percentages of existing forest area by seral stage distribution within the biogeoclimatic units of a landscape unit, using the definitions of mature and old forest as defined within KBHLPO Objective 2. In landscape units shared with forest licensees, analyses will include all licensees’ existing and authorized timber harvesting obtained through referrals, as described in section 4.3.2.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Site Plan Results and Strategies Sections:</p> <ul style="list-style-type: none"> – 5.3.1. Biodiversity Emphasis <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Biodiversity Assessment Summary
5.3.1.3 Green-up	☒	-	<p>5.3.1.3 GREEN-UP</p> <p>Legal References: KBHLPO Objective 4, FPPR Sections 12(4) to 12(6)</p> <p>Relates to: KBHLPO Objective 7, FSP Sec. 5.2.2 and Sec. 5.3.1.6</p> <p>For the objective for Green-up that is set out in Objective 4 of the KBHLPO, the TSM specifies the following result:</p> <p>RESULT 1</p> <p>The proposed cutblock is consistent with the practice requirements in Section 65 of the FPPR except that the height requirement in Section 65(3)(a) and Section 65(3)(b)(ii) is reduced from 3 meters to 2.5 meters.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Site Plan Results & Strategies Sections:</p> <ul style="list-style-type: none"> – 5.2.2 Enhanced Resource Development Zones - Timber – 5.3.1.6 Wildlife and Biodiversity-Landscape Level <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Green-up Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Green-up Assessment
5.3.1.5 Water, Fish, Wildlife and Biodiversity within Riparian Areas	☒	-	<p>5.3.1.5. WATER, FISH, WILDLIFE AND BIODIVERSITY WITHIN RIPARIAN AREAS</p> <p>Legal References: FPPR Sec. 8, Sec. 12.1(6) and Sec. 12(3)</p> <p>Relates to: FSP Sec. 5.3.1.7</p> <p>RESULT AND STRATEGY 1</p> <p>This cutblock is consistent with FPPR Sections 47 to 51, 52(2), and 53¹. This Site Plan serves as notification by the TSM to each holder of a timber sale licence or road permit to which the plan relates that the above sections of the FPPR apply to the holder's primary forest activities carried out during the term of the plan.</p> <p>STRATEGY 2</p> <p>STRATEGY 2a</p> <p>There are classified riparian features with Riparian Management Zones (as defined in FPPR Sections 47 to 49) located within and adjacent to this cutblock.</p> <p>A QRP conducted and documented an assessment of the Riparian Management Zones (RMZs) of all streams and/or wetlands and/or lakes, located within and adjacent to this cutblock, established site-specific tree retention specifications, and made recommendations to prevent/mitigate unavoidable adverse impacts to the RRZ, if present, and to stream channels. The assessment included all of the factors specified under FSP Section 5.3.1.5 Strategy 2a, as applicable.</p> <p>RESULT 2b</p> <p>At the completion of harvesting, tree retention levels in RMZs within a cutblock, as prescribed by a QRP in this Site Plan, Harvest Plan, and Supporting Documents will:</p> <ul style="list-style-type: none"> i. be as specified under FSP Section 5.3.1.5 Result 2b.i.; ii. where trees are retained, be either regularly distributed or irregularly distributed as single trees or groups of trees; and iii. where trees are retained, include the number, distribution, species, size(s) and characteristics as specified by the QRP. <p>Refer to the Support Document, Harvest Plan and Riparian Assessment for specific details of the riparian retention prescription.</p> <p>STRATEGY 2c BCTS Action Items</p> <p>To monitor the effectiveness of prescribed tree retention levels within RMZs and provide information to prescribing QRPs, the TSM will, twice within the term of the FSP, conduct and prepare a summary of the results from assessments of forest development impacts to stream function², related to the level of tree retention within RMZs, from a sample² of S4, S5 and S6 streams where adjacent timber harvesting has been completed for at least two years.</p>

		<p>Compliance with this Strategy cannot be demonstrated at the Site Plan Level. The TSM is responsible for ensuring compliance with this Strategy and the maintenance of records to this effect.</p> <p>STRATEGY 2d</p> <p>There is tree retention in RMZs located within this cutblock. Retained trees will contribute to stand level WTRAs. This contribution has been calculated as per FSP Section 5.3.1.7 Result 2. Contributions to old and mature-plus-old retention requirements for biodiversity at the landscape level have not been calculated.</p> <p>STRATEGY 2e (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>In conducting timber harvesting, the direction of falling and yarding/skidding will be away from streams, wetlands and lakes, or parallel to streams, unless a safety hazard dictates otherwise or it is not practicable. For streams, where falling and yarding/skidding away is not practicable, directional bridging will be utilized prior to cross-stream yarding.</p> <p>STRATEGY 2f: (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>To protect the values of water quality, wildlife habitat, fish habitat and stream bank and channel stability, introduced slash and debris will be removed from all stream channels concurrent with harvesting³.</p> <p>STRATEGY 2g (Verbatim from FSP)</p> <p>To maintain stream bank and stream channel integrity on all streams that do not have a riparian reserve zone a minimum 5 metre machine-free zone will be established along both sides of streams within harvest areas where ground-based equipment will operate, with the exception of designated / stream-crossing trails⁴.</p> <p>STRATEGY 2h (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>Where designated stream crossing trails are prescribed, these will be temporarily installed to facilitate the environmentally safe⁴ transport of logs or trees across stream channels and removed as soon as their use is no longer required.</p> <p>STRATEGY 2i (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>As a strategy that applies to the TSM and each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM, primary forest activities will minimize new coarse woody debris and sediment inputs into streams to the extent practicable.</p> <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For information, with regard to FPPR Section 53, there are no temperature sensitive streams designated within any of the FDUs of this FSP as of the submission date of the FSP</p> <p>² Assessments of forest development impacts to stream function and sample population selection criteria will follow the relevant sections of the most current Forest & Range Evaluation Program (FREP) ‘Protocol for Evaluating the Condition of Streams and Riparian Management Areas’ and associated field procedures.</p> <p>³ The following are the requirements for removing introduced slash and debris from all stream channels:</p> <ul style="list-style-type: none">• Remove all introduced debris (tree stems, branches, and other woody debris) greater than 1 metre in length, and shorter lengths if accumulated together, from stream channels. ‘Stream channel’ means the maximum wetted perimeter or area between the stream banks, whichever is greater.• In addition to the above debris, remove all introduced segments of tree stems/logs, or log ends of any length resulting from landing and timber processing activities, from stream channels.• Conduct removal of harvesting debris concurrent with logging. ‘Concurrent’ means prior to spring freshet or demobilization of skidding/yarding equipment, whichever is earlier.• Place removed debris where it will not re-enter the stream as a result of downslope movement or stream peak flows.• Do not remove pre-harvest embedded or natural woody debris.• Do not use heavy machinery to remove fine harvest debris in areas where stream banks, natural woody debris or riparian vegetation will be disturbed. <p>⁴ With reference to designated stream crossing trails and ‘environmentally safe’ transport of logs or trees described in this section, such designated crossings will incorporate the following, as practicable:</p> <ul style="list-style-type: none">• crossing perpendicular to the stream channel and at a location having the narrowest width, a straight section (not meandering or braided) and with solid, stable stream banks, bed and approaches;• use of structures and/or materials that will not obstruct stream flow (if present) and placement techniques (e.g., lifting into place) that will avoid destabilizing stream banks or channel bed;• installation of sediment and erosion control measures, as appropriate, before
--	--	--

			<p>starting work;</p> <ul style="list-style-type: none"> • avoiding or minimizing exposed channel crossings by equipment (e.g., one time, tracked machine only); and • deactivation practices that maintain stream bank stability, avoid channel, bank and adjacent soil disturbance, re-stabilize exposed soils, re-establish natural drainage, and remove introduced debris and foreign materials. <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Site Plan Results & Strategies Sections:</p> <ul style="list-style-type: none"> – 5.3.1.7 Wildlife and Biodiversity - Stand Level <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Riparian Assessment Summary – Reserve / Retention Information <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Riparian Assessment – WTRA Cards – Harvest Plan

5.6. Cultural Heritage Resources	☒	-	<p>5.6. CULTURAL HERITAGE RESOURCES Legal References: FPPR Sec. 10</p> <p>For the objective to conserve or protect cultural heritage resources (CHRs) that is set out in Section 10 of the FPPR, the strategies¹ specified by the TSM are:</p>

		<p>STRATEGY 1</p> <p>This cutblock is located within the asserted traditional territories of the First Nations listed within the Support Document. (List compiled at the time of Site Plan preparation.)</p> <p>Information was provided to First Nations (either directly to individual bands or through councils/alliances and as determined by the TSM), prior to the TSM constructing a road or entering into an agreement authorizing timber harvesting or road construction associated with this cutblock.</p> <p>Written requests to share information were sent to First Nations. These requests provided an opportunity of at least 30 days, unless otherwise agreed to, for review and comment on the Operational Plan, and specifically included:</p> <ul style="list-style-type: none">a. a description and a map of the forest development activities planned;b. a request for comments and information on the type, location, and extent of any traditional use that is of continuing importance to the First Nation; andc. an offer to meet with the First Nation. <p>STRATEGIES 1, 2, 3, & 4 (BCTS Action Items)</p> <p>BCTS has committed to the TSM (or designate) issuing a First Nations Consultation Sign-Off (Sign-Off) before the TSM constructs a road or enters into an agreement that authorizes timber harvesting or road construction within the asserted traditional territory of a First Nation. This Sign-Off will address how the referral process undertaken meets the applicable requirements of the following Strategies as described in the FSP: to share information (Strategy 1); to hold meetings (Strategy 2); to receive comments and complete evaluations (Strategy 3); and to provide feedback and consider/implement recommendations (Strategy 4).</p> <p>BCTS will file the completed Sign-Off with this Site Plan to demonstrate consistency with these Strategies. BCTS will amend this Site Plan and/or Support Document as necessary to document rationales, incorporate feedback, and make changes to this cutblock to reflect BCTS' approach to managing First Nations consultation.</p> <p>Compliance with this Strategy cannot be demonstrated at the Site Plan level. The TSM is responsible for ensuring compliance with this Strategy and the maintenance of records to this effect.</p> <p>STRATEGY 5 (Verbatim from FSP)</p> <p>(Contractor & Agreement Holder Action Items) & (BCTS Action Items)</p> <p>Where traditional use information is made available, the TSM will hold any information received in confidence. It is only with the express written consent or direction of the holder of the traditional use information that the TSM will release any information to any other party (including other First Nation groups or government agencies).</p> <p>STRATEGY 6 (Verbatim from FSP)</p> <p>(Contractor & Agreement Holder Action Items) & (BCTS Action Items)</p> <p>If the TSM becomes aware of a First Nations artifact in the location of a licence or permit entered into or road construction authorized by the TSM, the TSM will modify or cease operations to the extent necessary to protect the resource, and undertake the following steps:</p> <ul style="list-style-type: none">a. record the location of the artifact;b. evaluate the direct impact of the activities on the artifact;c. if the above evaluation determines it necessary, alter the design and/or prescription of the licence, permit or road to conserve, mitigate or protect the artifact; andd. communicate the outcome of the evaluation to the First Nation whose artifact may be affected and offer to meet with the First Nation. <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ Strategies #1 to #5 have been implemented before the TSM constructs a road or enters into an agreement that authorizes timber harvesting or road construction while Strategy #6 will be utilized in the event that risk to a First Nation's artifact is identified after a licence or permit is entered into or road construction is authorized.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none">– Cultural Heritage Resources Assessment Summary– Archaeological Overview / Impact Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none">– Operational Plan / Landscape Level Assessment– Archaeological Overview / Impact Assessment– First Nations Consultation Sign-offs– Cultural Conservation Values Assessment

5.7. Recreation Resources	☐	☒	<p>5.7. RECREATION RESOURCES</p> <p>Legal References: FRPA Sec. 56, Sec. 180 and Sec. 181, FPPR Sec. 70(1), FRR Sec. 16</p> <p>Where the TSM constructs a road or enters into an agreement that authorizes timber harvesting or road construction in an area where these activities may affect an interpretive forest site, a recreation site or a recreation trail, the following result (#1) and strategies (#2 to #7) are specified:</p> <p>RESULT 1 and STRATEGIES 2 to 7</p> <p>Timber harvesting and/or road construction associated with this cutblock will not affect an interpretive forest site, a recreation site, a recreation trail or the Dewdney Trail, as identified on the FDU maps of this FSP. There are no requirements under Result 1 and Strategies 2 to 7 that are applicable to this cutblock.</p> <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, ‘primary forest activities’ means one or more of the following: (a) timber harvesting; (b) mechanical silviculture treatments; (c) road construction and deactivation.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Recreation Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Operational Plan / Landscape Level Assessment
5.8.1 Road Maintenance	☒	-	<p>5.8.1. ROAD MAINTENANCE</p> <p>Legal References: FPPR Sec. 79</p> <p>The TSM adopts, as a result or strategy related to Forest Roads, Section 79 (road maintenance) of the FPPR and the following additional strategy is specified as a requirement that applies to each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM and applies to any road which provides industrial access to one or more of the above agreements, unless such road has been made the responsibility of another industrial user to maintain by the District Manager:</p> <p>FPPR SECTION 79 (Road Maintenance) (Contractor & Agreement Holder Action Items)</p> <p>Each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM that is associated with this cutblock shall comply with FPPR Section 79.</p> <p>STRATEGY 1 (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>Unless otherwise exempted in writing by the TSM, each agreement holder shall carry out road maintenance and ensure the following:</p> <ol style="list-style-type: none"> a. the structural integrity of the road prism, road subgrade and clearing width are protected; b. the existing road surface and slope drainage systems (including ditches, culverts, road crowning and in-sloping and out-sloping) are functional at all times and measures to prevent water pooling on the road surface and erosion of surfacing material are undertaken; c. road surface drainage is directed to stable slopes and drainage structures and is not impeded; d. the road can be used safely by industrial users; e. upon completion of industrial use, during periods of non-industrial use, and/or when precipitation is occurring in an amount causing erosion of surface material: <ol style="list-style-type: none"> i. back-up cross ditches are installed at culvert locations; and ii. surface water-bars are established to disperse runoff. <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none"> – Terrain Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none"> – Terrain Stability Assessment / Site Review – Harvest Plan
5.8.2 Road Deactivation	☒	-	<p>5.8.2. ROAD DEACTIVATION</p> <p>Legal References: FPPR Sec. 82</p> <p>Relates to: FSP Sec. 5.8.1 and 5.8.3</p> <p>The TSM adopts, as a result or strategy related to Forest Roads, Section 82 (road deactivation) of the FPPR and the following additional strategy is specified as a requirement that applies to each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM:</p>

		<p>FPPR SECTION 82 (Road Deactivation) (Contractor & Agreement Holder Action Items)</p> <p>Each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM that is associated with this cutblock shall comply with FPPR Section 82.</p> <p>STRATEGY 1 (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>Unless otherwise exempted in writing by the TSM, each agreement holder shall carry out road deactivation¹ during the term of the agreement and ensure the following:</p> <ul style="list-style-type: none">a. a Road Deactivation Plan² shall be prepared by a QRP;b. road deactivation works shall be supervised by a Qualified Professional;c. a Statement of Road Deactivation Conformance shall be signed by a QRP which certifies that:<ul style="list-style-type: none">i. the road deactivation work has been carried out in general conformance with the Road Deactivation Plan, and any road deactivation prescriptions, design amendments or other relevant documents if applicable;ii. sufficient field reviews of the work at the project site(s) have been carried out at appropriate times during the deactivation work; andiii. significant revisions to any prescriptions and supporting documents prepared for the road deactivation project, including all prescription amendments, have been documented and recorded on a set of drawings (maps) marked “as-built” and, where necessary, described in supporting documents;d. if requested by the TSM, a copy of the signed Statement of Road Deactivation Conformance shall be provided to the TSM within 30 days following the completion of road deactivation. <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, ‘road deactivation’ means permanent, self-maintaining deactivation of a road carried out to mitigate stability and erosion hazards, in order to prevent material adverse effects to FRPA values, for roads no longer required for industrial use. Road deactivation includes stabilizing the road prism, removing drainage structures, and measures to limit erosion. Other measures on roads that are to be retained are considered maintenance.³</p> <p>² For the purposes of this section, a ‘Road Deactivation Plan’ means a professional document which provides road standards, design specifications, measures, and other information, as applicable, to facilitate understanding of the works to be carried out by personnel who supervise or carry out road deactivation.³ As determined applicable by a QRP, a Road Deactivation Plan will consist of measures prescribed, a map showing the locations of the measures prescribed, site conditions that may be a concern for worker safety, identification of special concerns that affect the timing or conduct of the work, recommendations for equipment or special work procedures necessary, input from specialists, and/or where field reviews should be carried out during or following the work.³</p> <p>³ Adapted from: Professional Engineers and Geoscientists of BC and Association of BC Forest Professionals. 2012. Guidelines for Professional Services in the Forest Sector – Forest Roads. Guidance related to forest road deactivation is available within this reference, as well as within the MFLNRORDRD Engineering Manual.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none">– Terrain Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none">– Terrain Stability Assessment / Site Review– Harvest Plan
5.8.3 Revegetation following Road Construction and Deactivation	☒	<p>-</p> <p>5.8.3. REVEGETATION FOLLOWING ROAD CONSTRUCTION AND DEACTIVATION</p> <p>Legal References: FPPR Sec. 40</p> <p>Relates to: FSP Sec. 6.1</p> <p>The TSM adopts, as a result or strategy related to Forest Roads, Section 40 (revegetation) of the FPPR and the following additional strategy is specified as a requirement that applies to each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM:</p> <p>FPPR SECTION 40 (Revegetation) (Contractor & Agreement Holder Action Items)</p> <p>Each holder of an agreement under Section 12(2) of the Forest Act entered into by the TSM that is associated with this cutblock shall comply with FPPR Section 40.</p> <p>STRATEGY 1 (Verbatim from FSP) (Contractor & Agreement Holder Action Items)</p> <p>Unless otherwise exempted in writing by the TSM, each agreement holder shall carry out revegetation and ensure the following:</p> <ul style="list-style-type: none">a. upon completion of road construction and deactivation/rehabilitation activities, exposed mineral soils on:<ul style="list-style-type: none">i. cut and fill slopes along new roads;iii. landings; and

			<p>iii. deactivated/rehabilitation areas; will be grass seeded concurrent with, or during the first spring or fall after the completion of, road construction and deactivation/rehabilitation activities and no later than 12 months following mineral soil exposure, except if the exposed mineral soils are:</p> <p>1) within an area that will be revegetated through the planting of trees, and 2) not a high hazard for soil erosion (as determined from a hazard assessment key)</p> <p>b. if utilizing a dry grass seeding method, seed shall be applied at a rate of 30 to 50 kilograms per hectare; and c. grass seeding will utilize high quality seed (a mix recommended by a MFLNRO range specialist, if available; otherwise Canada Common #1 or better grade) and obtain a Certificate of Analysis, providing a copy to the TSM upon request, to confirm that invasive plant seeds are not present in the seed mixes being utilized.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION Other Documents / Assessments / Resources (as applicable): – Harvest Plan</p>

FSP MEASURES

MEASURES SECTION	APPLIES?		HOW THE MEASURES APPLY TO THE SITE or RATIONALE (IF NOT APPLIED)
	YES	NO	
6.1. Measures to Prevent the Introduction or Spread of Invasive Plants	☒	-	<p>6.1. MEASURES TO PREVENT THE INTRODUCTION OR SPREAD OF INVASIVE PLANTS Legal References: FRPA Sec. 47, FPPR Sec. 17 Relates to: FSP Sec. 5.8.2</p> <p>For the purposes of FRPA Sec. 47 and FPPR Sec. 17 (invasive plants), the TSM specifies the following measures to prevent the introduction or spread of invasive plants:</p> <p>MEASURE 1 Known invasive plant infestations were identified using the MFLNRO Invasive Alien Plant Program (IAPP) and Invasives BC database.</p> <p>Site specific measures to minimize the establishment and/or spread of invasive plants have been incorporated into this site plan and tenure agreements and are detailed under Measure 3.</p> <p>MEASURE 2a (BCTS Action Items) Invasive plant awareness training, developed by a qualified professional, is conducted for new BCTS field staff within 1 year of the start of employment and for all field staff a maximum of every five years, is documented in a training record, and includes information regarding species identification, monitoring programs, reporting methods and implementation of control measures.</p> <p>Compliance with this Strategy cannot be demonstrated at the Site Plan level. The TSM is responsible for ensuring compliance with this Strategy and the maintenance of records to this effect.</p> <p>MEASURE 2b (BCTS Action Items) Invasive plant awareness training is mandatory for all staff and contract personnel carrying out layout and development activities and/or monitoring the performance of contractors or agreement holders engaged in primary forest activities.</p> <p>Compliance with this Strategy for BCTS staff cannot be demonstrated at the Site Plan level. The TSM is responsible for ensuring compliance with this Strategy and the maintenance of records to this effect.</p> <p>MEASURE 2c (Contractor & Agreement Holder Action Items) & (BCTS Action Items) Outside of known infestation areas, field staff and other key personnel carrying-out activities in the field entered any newly identified invasive plant infestations encountered during planned forest development activities into the MFNRO report-a-weed reporting system within 30 days of discovery.</p> <p>Field staff and other key personnel carrying-out active forest development activities in the field will enter any newly identified invasive plant infestations encountered into the MFNRO report-a-weed reporting system within 30 days of discovery.</p> <p>MEASURE 2d (Contractor & Agreement Holder Action Items) & (BCTS Action Items) Contractors engaged in road building activities and agreement holders will be provided with an information package regarding the identification and reporting of invasive plants. Where applicable based on Measure #1 above, measures to minimize the establishment and spread of invasive plants are requirements within contracts</p>

			<p>and agreements. Contract / agreement requirements related to invasive plants will be reviewed at pre-work meetings and monitored for conformance.</p> <p>MEASURE 3 (Contractor & Agreement Holder Action Items)</p> <p>To minimize the establishment and spread of invasive plants the following measures are a requirement, that applies to each holder of an agreement under Section 12(2) of the Forest Act and each holder of a contract to construct a road or conduct silviculture mechanical site preparation:</p> <p>a. vehicles, mechanized equipment, culverts, bridges and cattle-guards are to be inspected for the presence of soil or plant material, including documentation on inspection forms, prior to being transported to or from work sites and, if present, plant and soil materials are to be removed;</p> <p>b. to reduce the available seedbed for invasive plants, grass seed exposed mineral soils on:</p> <p>i. cut and fill slopes of new roads;</p> <p>ii. new trails and landings; and</p> <p>iii. deactivated / rehabilitated areas;</p> <p>during the first available spring or fall and not more than 12 months following mineral soil exposure, except if the exposed mineral soils are:</p> <p>1) within an area that will be revegetated through the planting of trees</p> <p>2) not a high hazard for soil erosion (as determined from a hazard assessment key);</p> <p>c. if utilizing a dry grass seeding method, seed shall be applied at a rate of 30 to 50 kilograms per hectare; and</p> <p>d. where grass seeding is undertaken, utilize high quality seed (a mix recommended by a MFLNRORD range specialist, if available; otherwise Canada Common #1 Forage mix or better grade) and obtain a Certificate of Analysis, providing a copy to the TSM upon request, to confirm that invasive plant seeds are not present in the seed mixes being utilized.</p> <p>MEASURE 4 (Contractor & Agreement Holder Action Items) & (BCTS Action Items)</p> <p>No invasive plant infestations were identified in this cutblock. Personnel conducting post-harvest surveys are required to identify and report new invasive plant infestations observed during surveys.</p> <p>MEASURE 5</p> <p>This cutblock is not located within the Rocky Mountain FDU. There are no requirements under this Measure that are applicable to this cutblock.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p> <ul style="list-style-type: none">– Invasive Plants Assessment Summary <p>Other Documents / Assessments / Resources (as applicable):</p> <ul style="list-style-type: none">– Detailed Location Map– Site Plan Map
6.2. Measures to Mitigate the Loss of Natural Range Barriers	☐	☒	<p>6.2. MEASURES TO MITIGATE THE LOSS OF NATURAL RANGE BARRIERS</p> <p>Legal References: FRPA Sec. 48 and Sec. 51, FPPR Sec. 18</p> <p>For the purposes of FRPA Sec. 48 and FPPR Sec. 18 (natural range barriers), the TSM specifies the following measures to mitigate the effect of removing or rendering ineffective natural range barriers¹:</p> <p>MEASURES 1, 2, 3 & 4</p> <p>This cutblock is not within the area of a range agreement. There are no requirements under these Measures that are applicable to this cutblock.</p> <p>FOOTNOTES</p> <p>(Note: All footnotes may not appear in the Results and Strategies above.)</p> <p>¹ For the purposes of this section, a ‘natural range barrier’ is defined as a stand of trees or topographic feature that stops or impedes livestock movement to or from an adjacent area.</p> <p>² For the purposes of this section, a ‘reasonable effort’ is defined as a documented written notice sent to the contact address, identified from the relevant MFLNRORD database, of a range tenure holder, including the information in 2a and 2b above and the website address where a map of the proposed development may be accessed, and providing a ‘reasonable opportunity for review and comment’ (as defined in FSP Section 2.2).</p> <p>³ For the purposes of this section, ‘potential impacts’ include increased cattle access to other range agreement areas, riparian areas, winter ungulate ranges, alpine habitats, parks and protected areas, recreation areas, plantations and private land.</p> <p>REFER TO THE FOLLOWING FOR ADDITIONAL INFORMATION</p> <p>Support Document Sections:</p>
