

BRITISH COLUMBIA ARCHAEOLOGICAL IMPACT ASSESSMENT INTERIM REPORT FORM

1. REPORT TITLE

2019-0140-13402	Archaeological Impact Assessment of Proposed Stuart-Nechako British Columbia Timber Sales Cut Block AIR20_05.
-----------------	---

2. MANAGEMENT SUMMARY

2.1	Protected HCA Sites:	N/A
2.2	Brief Overview of Study: ARCHER CRM Partnership (ARCHER) conducted an archaeological impact assessment (AIA) on the subject project at the request of David Zurevinski of Stuart-Nechako British Columbia Timber Sales (BCTS Stuart-Nechako). An in-office review of the proposed cut block prior to field assessment identified areas of potential for culturally modified trees (CMTs) based on the VRI data of a tree stand of sufficient age for pre-1846 CMTs.	
2.3	Results: No areas of subsurface archaeological potential, archaeological sites or other cultural heritage resources protected under the <i>Heritage Conservation Act</i> (HCA) were identified as a result of this study.	
2.4	Management Recommendations: Our visual inspection of the proposed BCTS Stuart-Nechako cut block AIR20_05 did not result in the identification of archaeological or other cultural heritage remains protected under the <i>Heritage Conservation Act</i> (HCA). To address the prospect of unanticipated archaeological materials and/or features being discovered, it is recommended that the proponent inform its employees and contractors of this possibility. If archaeological materials or other heritage remains are uncovered during harvest, work in the area of the find must immediately cease and the Archaeology Branch and/or ARCHER informed. It is recommended that the proponent also promptly inform the relevant First Nations concerning any unanticipated archaeological findings.	

3. ADMINISTRATIVE INFORMATION

3.1	Permit Holder:	Frank Craig f.craig@archercrm.ca	3.2	Permit Holder Affiliation:	ARCHER CRM Partnership T: 250-567-9496
3.3	Proponent Contact:	David Zurevinski David.zurevinski@gov.bc.ca	3.4	Proponent Affiliation:	BCTS Stuart-Nechako T: 250-567-6331
3.5	Interim Report Author(s):	Nicole Jackman			
3.6	Interim Report Date & Version:	August 11, 2020			
3.7	Notification of Work Date:	May 11, 2020: <ul style="list-style-type: none"> Binche Whut'en First Nation McLeod Lake Indian Band Nak'azdli Whut'en First Nation

--	--	---

4. PROPOSED DEVELOPMENT

4.1	<i>Description:</i>	British Columbia Timber Sales Stuart-Nechako Business Area proposed cut block AIR20_05 <ul style="list-style-type: none"> • Logging block for timber harvest (33.9 ha)
4.2	<i>Location:</i>	The development is located southwest of Tchentlo Lake, northeast of Glauzers Lake, and immediately west of the Driftwood FSR. The study area is specifically situated at NAD 83 UTM Zone 10N UTM Coordinates (approximate center) E: 357554 N: 6118622.

5. FIELD CREW

6. ARCHAEOLOGICAL METHODS & RESULTS

6.1. Pre-field Methodology

- ☒ Archaeological potential and sites are indicated on the Study Area Map
- ☐ An AOA and /or archaeological predictive model exists for the study area
Details:
- ☐ Previous field studies influenced this assessment
Details:
- ☒ Review of Provincial Heritage Register
Date Accessed: May 19; July 30, 2020
- ☐ Other
Details:

Table 2. Archaeological Sites in the Vicinity of the Study Area

<i>Borden No.</i>	<i>Distance & Direction from the Proposed Development</i>	<i>Site Type</i>	<i>Permit No. of Previous Visits</i>	<i>Site in Conflict (Y/N)</i>
GhSh-2	2496 m west	Traditional Use – Culturally Modified Tree	2007-140	N
GhSh-1	4134 m northwest	Takla Lake-Tchentlo Lake Trail (portage)	No permit	N
GgSh-8	4725 m southwest	Traditional Use – Culturally Modified Tree	2007-140	N

6.2. In-field Methodology

☐ Subsurface test measurements are a minimum of 35 x 35 cm

Date Accessed: July 21, 2020

Desk-top identified areas of archaeological potential and timber stands subject to possible impact were visually assessed by crew members on the ground. During the field assessment, the study area was visually assessed by one crew with three crew members walking parallel to each other, spaced in a manner that would enable maximum coverage depending on visibility and archaeological potential of the area. Where applicable, natural and anthropogenic soil exposures (eroded banks, tree throws, etc.) in the project footprint were visually examined for cultural remains in disturbed or secondary contexts.

No areas of archaeological potential were observed within the assessed study area boundaries, and no subsurface testing was conducted.

CMTs in or adjacent to the subject project were sought given the presence of mature forest cover, however no CMTs were identified during assessment.

6.2.1	Number of Crew Members:	2	6.2.2	Crew Spacing:	15 m
6.2.3	Other:	A wandering transect through the block was traversed.			

6.3. In-field Observations

The study area terrain is generally sloping and featureless. No landforms were observed along ephemeral stream margins or elsewhere through the block. The forest cover consists of a mix of spruce, sub-alpine fir, lodgepole pine and aspen. The understory includes alder, thimbleberry, Devil's club, blueberry, cranberry, black gooseberry, mountain ash, Saskatoon berry, false Solomon's seal, hellebore, rose, bramble and colt's foot.

The block was flagged at the time of survey. No previous ground disturbances were observed. A single recent blazed tree was noted as illustrated on Figure 1.

6.4. Results

No areas of subsurface potential were noted as a result of this assessment. No archaeological sites or other cultural heritage resources protected under the *Heritage Conservation Act* (HCA) were identified during this study.

7. ARCHAEOLOGICAL SITE SUMMARY

No archaeological sites were identified or revisited.

8. DISCLOSURE STATEMENT & SIGNATURE

Project footprint boundaries illustrated on the attached map(s) indicate those areas subject to the archaeological assessment described in this report, unless otherwise noted. If future or final construction and development plans differ from those presented here, the results of this assessment may not be applicable in part or in whole.

To address the prospect of unanticipated archaeological remains being discovered, it is recommended that the proponent inform its employees and contractors of this possibility. If archaeological materials or other heritage remains are uncovered during construction, work in the area of the find must immediately cease and the Archaeology Branch and/or ARCHER informed. It is recommended that the proponent also promptly inform the relevant First Nations concerning any unanticipated archaeological findings.

It was not the intent of this study to identify, evaluate, or comment on the presence or absence of Aboriginal Rights in the study area. Completion of this study does not "abrogate or derogate from aboriginal treaty rights" (Heritage Conservation Act Sec. 8). The study was conducted without prejudice to First Nations Treaty

Negotiations, aboriginal rights or aboriginal title.

It is my opinion that the reported fieldwork and this corresponding report were completed in agreement with the requirements of the relevant Heritage Inspection Permit issued by the Archaeology Branch. I concur that the above information is true given available information.

Sincerely,

ORIGINAL DOCUMENT SIGNED

Nicole Jackman, M.A., RPCA
Field Director, on behalf of,

Frank Craig, B.A., RPCA
Permit holder
